```
1 import { useState } from 'react';
2 import './App.css';
3
4 const initialNumbers = [7, 5, 99, 666];
5
6 export default function App() {
7   const [numbers, setNumbers] = useState( initialState: initialNumbers);
8
9   console.log( data[0]: 'App', data[1]: numbers);
10
11   function onSubmit(event) {
12     event.preventDefault();
13     const newNumber = event.target.quantity.value;
14     console.log( data[0]: 'App: onSubmit', data[1]: newNumber);
15     setNumbers([...numbers, newNumber]);
16     // see how numbers.push(newNumber) DOES NOT cause a re-render!
17   }
18
19   return (
20     <div className="app">
21       <form onSubmit={onSubmit}>
22         <label>
23           Number
24           <input type="number" name="quantity" required />
25         </label>
26         <button>Add</button>
27       </form>
28       {numbers.map( callbackfn: (number) => (
29         <div key={number} className="box">
30           {number}
31         </div>
32       ))}
33     </div>
34   );
35 }
36
```
