React State vs Props (forked)

Open in

App.css App.jsx

```
1 import './App.css';
2
3 const postInfo = {
4   author: 'Diego',
5   title: 'Some Stuff!!!',
6 };
7
8 export default function App() {
9   const { title, author } = postInfo;
10   return (
11     <div className="container">
12       <BlogPost title={title} author={author} />
13       <BlogPost {...postInfo} />
14     </div>
15   );
16 }
17
18 // <BlogPost/>
19
20 // Write a react function component called BlogPost that takes
21 // - a title and an author as props
22 // and returns an <article> with inside:
23 // - the title in an <h2>
24 // - the author in a <p>
25
26 function BlogPost({ title, author }) {
27   return (
```

Terminal

14:20:04 [vite] hmr update /src/App.jsx
